I . Introduction

1. What is 'Youeti'?

A Youetitoken is a token that operates on a ton that is a fully decentralized layer-1 blockchain designed by Telegram to onboard bills of users. Therefore, we can experience an immediate exchange of values using YUTI. Fast transaction speeds and low transaction fees support this. "Youeti," which corresponds to the name of tokens and coins, means "You&I," meaning that cryptocurrency will be valuable depending on the relationship and choice between you and i.

2. Project Background

Unlike in the past, when modern society relied only on spot currency, the emergence of cryptocurrency has made it possible to exchange assets beyond time and space. However, decades after the advent of cryptocurrency, cryptocurrency does not have the instant speed and stability of spot currency. As the instability of spot currency is revealed repeatedly, we are calling for a new perspective on cryptocurrency. Therefore, cryptocurrency needs to be developed repeatedly to have both fast transaction speed and stability. Of course, everyone knows that efforts are being made to improve transaction speed, such as hard forking from Bitcoin to Litecoin. However, it is not easy to find a currency in the blockchain market with fast transaction speed, low transaction fees, and practicality.

So we chose to build on an instant exchangeable coin and put practicality on it. As We said before, a Youetitoken is a token that operates on a ton that is a fully decentralized layer-1 blockchain designed by Telegram to onboard bills of users. This allows the token to be received immediately at the same time as transaction. You can send it to others who are interested in YUTI, send it to a friend next to you, or send it to others who want to exchange it.

YUTI will not just be issuing tokens, but will also develop miningable coins to drive its own coin economy. Token users will be able to receive YUTI first through AirDrop, which will be equivalent to the 14-day mining volume of coins to be developed later.

II . YUTI Blockchain

1. What is Youetitoken

Youetitoken is a token based on the ton network, and transmission rates and transmission fees are also attributed to the ton coin. The value of Youetitoken is its own, but its foundation is on top of the coin that already exists. Therefore, appear to be the advantages of fast transaction speed and low transaction fees, and appear to be the disadvantages that the fees used cannot be distributed back to YUTI users.

Youetitoken will be distributed only in the form of airdrops and rewards after the start of the service, when anyone can participate and anyone can receive tokens. In addition, tokens will be available in various ways in the Internet cryptocurrency ecosystem, including transactions with others, purchase of game items, purchase of videos and images, purchase of NFTs, and platform content.

2. What is Youeticoin

Youeticoin is a coin based on its own nodes and networks, and will be developed by hardcoding Bitcoin and Litecoin open sources. Because it is based on its own network, the coin transfer fee is also attributed to YUTI, which can provide an environment for coin holders to be redistributed back later. In addition, the time of the block will be reduced so that immediate transaction can take place.

Youeticoin will be distributed in the form of mining, airdrop, and will provide a simple form of mining program for anyone who is new to mining to participate. Block times and difficulty cycles will be the same to prevent mining difficulties from soaring and maintaining by certain prime numbers, and will take place in a short time. Subscription platforms and Dapps created during the YUTI project will be built on Youeticoin, where coins will be available.

III. Roadmap

1. YUTI(Yong Unite Try In the future) Project

Creating value through communication and exchange between you and i. Send and receive YUTI tokens with minimal transaction fees and fast transaction speeds. A YUTI token is a token that operates on a ton that is a fully decentralized layer-1 blockchain designed by Telegram to onboard bills of users.

Sortation	Project Step
Young	Youetitoken issuance and 1st airdrop starts
Unite	Youeticoin issuance and enable smart contract
Try	Cryptocurrency exchange listing and digital society platform distribution
In the future	Implementation of YUTI-based online socioeconomic system

2. Future of Youticoin

Young) Youetitoken issuance and 1st airdrop starts

A total of 105,000,000 YUTI tokens will be issued, and sites and white papers will be produced and published. In addition, the primary airdrop is carried out to increase the number of token users.

Unite) Youeticoin issuance and enable smart contract

Bitcoin and Litecoin-based youeticoin based on gui mining method will be hard forked and distributed. 105,000,000 YUTI, five times the total Bitcoin issuance, will be issued, and the transaction speed will be improved by more than 120 times. In addition, YUTI will be applied to the self-hosted digital content subscription platform to provide the use of coin and token users.

Try) Cryptocurrency exchange listing and digital society platform distribution

Exchange listing for provision of value of coin and token will take place. In addition, we will build and stabilize sites, subscription platforms, and online games to complete the practicality and usability of tokens.

In the Future) Implementation of YUTI-based online socioeconomic system

Based on high practicality, usability, and liquidity, an online social and economic system based on YUTI will be implemented. Will experience daily utility through immediate exchange.

IV. Distribution Plan

1. Total Supply

1) Youetitoken

- 105,000,000 YUTI

2) Youeticoin

- 105,000,000 YUTI

2. Distribution Plan

1) Youetitoken

Sortation	Amount	Percent	Error range
The management team	10,500,000	10	±1
Website Airdrop	1,100,000	1	±0.1
Game Airdrop	11,000,000	11	±1.1
User Airdrop	24,200,000	23	±2.3
Marketing	1,100,000	1	±0.1
Plarform Airdrop	10,500,000	10	±1
D-topia	46,600,000	44	±4.4

2) Youeticoin

Sortation	Amount	Percent	Error range
The management team	2,100,000	2	±0.5
Mining	99,750,000	95	±0.1
Airdrop	3,150,000	3	±0.3

3. Note

1) Youetitoken

(1) The management team

Indicates the amount of tokens attributed to the token developer. As a developer's revenue, it will contribute to the development of tokens.

(2) Website Airdrop

The amount of tokens that will initially be distributed to people through the website.

(3) Game Airdrop

The amount of tokens to be distributed to users of YUTI stochastic games that will be developed and distributed in the future.

(4) User Airdrop

Amount of tokens to be distributed to token holders and YUTI content users.

(5) Marketing

It is a token distribution that will be provided in exchange for advertisement and promotion of YUTI tokens through Internet media.

(6) Platform Airdrop

Amount of tokens to be distributed in the YUTI ecosystem, including YUTI's subscribed platforms, games, websites, and communities.

(7) D-topia

The amount of tokens to be distributed in the YUTI Internet social economy.

1) Youeticoin

(1) The management team

Indicates the amount of coins attributed to the coin developer. As a developer's revenue, it will contribute to the development of coins.

(2) Mining

The amount of compensation coins that YUTI miners will get.

(3) Airdrop

Amount of coins to be distributed to coin holders and YUTI content users.

V . Points to Notes

1. Manegement

1) The distribution of tokens and coins is made only by airdrop and content compensation

The management will distribute tokens and coins only in the form of airdrop and content rewards, and the ICO will not proceed. However, you are free to make transactions between users.

2) Projects can be modified, suspended

Depending on the circumstances of the management, the contents of the project may change or be discontinued.

3) Tokens and coins from the management team can be distributed to the market

Tokens and coins held by management can be distributed to the market to revitalize the market, promote transactions, and monetize.

4) Value is not fixed

The value of tokens and coins is left to the free economy, which can increase and decrease in value.

2. Transaction

1) A problem caused by the wrong address of the wallet

The management team cannot help with problems caused by writing the wrong wallet address due to their own fault. If you enter the wrong wallet address, the YUTI is lost and cannot be found.

2) The transaction is your choice

Issues arising from transactions between users are the responsibility of the parties and cannot be resolved by the management.

3) Value is fluid

There may be price differences between buying and selling. You should keep that in mind and invest.

VI. Conclusion

Most of the cryptocurrencies currently distributed in the market are less accessible and difficult to understand, making it difficult for younger and older people to approach them easily. However, YUTI is a very accessible cryptocurrency. So anyone can access it, anyone can own it. For example, even elementary school students can own YUTI if they want to. Still, if you're young, it may not be possible to actually trade through an exchange, but YUTI provides a user-to-user trading experience through its official website, so you can jump in whenever you want. Transactions can attract other people's participation by creating selling posts and creating buying posts on forums on official websites.

In addition, YUTI will run a token issuance agency program to enhance people's understanding of cryptocurrency. People who have distrust in cryptocurrencies on the market, and those who dream of creating cryptocurrencies themselves, can participate in this program. You'll have the experience of getting your own tokens just by typing in a few forms, and those who issue their own tokens can give them away to friends or to many others by marketing them.

The cryptocurrency market is changing a lot at this moment, and numerous coins and tokens are being created every hour. Someone might be making it curious, someone might be making it business, someone might be making it bad. As it has become a market that anyone can access, it is also a reality that not everyone can succeed.

What would you do if you were a cryptocurrency developer? What future and what value do you want to create? Whatever the purpose, the intention to make a profit is indispensable. If developers don't want revenue, I don't think users will be able to expect revenue either.

Are you ready to build a crypto-based digital ecosystem with YUTI? The future where dreams come true will not be far away.
